EQ. 5 **Naval Power** · the instrument

$$NP = F \times P \times MDA^{\mu}, \qquad NP \in (0, 1]$$

F Force

Platforms, weapons systems, personnel, logistics, C2 systems, and tactical-operational maritime cyberdefense: the capabilities to plan and conduct cyberspace operations.

P Position

Strategic geography, naval bases, area control, and access to maritime traffic routes.

MDA^{μ} Maritime Domain Awareness

Coverage and quality of the maritime picture; μ calibrates its weight. The protection of the systems that produce it is measured in CS_m, not here.

Note: MDA is elevated to the level of F × P because without awareness of the domain, force and position do not translate into effective naval power. MDA (technical-operational) is distinct from maritime consciousness (cultural-identity), which enters strategic will.
