Bibliographic support of the extended formula, by component and methodological decision

Table 8 of the revised manuscript. Reference numbers follow the IEEE numbering of the manuscript (order of first citation).

Component or decision	Sources	What they support in the model
Foundations of maritime power	[13], [15], [16], [5]	Elements of sea power; maritime strategy beyond the fleet; maritime power as a system of interconnected elements
Classical core MP = MI × NP	[3], [17], [4], [14], [18]	Maritime power as the product of maritime interests and naval power, its Colombian adoption, and the content and analytical limits of the formula
Colombian institutional framework	[1], [2], [47], [48]	Maritime interests as a factor of national development and security; the protection of maritime interests through naval power as a strategic objective
MI	[47], [48], [5], [4]	Purpose of maritime power; n = 18 maritime interests for Colombia; identification of interests as a prior condition of naval planning
NP = F × P × MDA^{μ}	[13], [5], [4], [11]	Force and position; technology and doctrine; Colombian naval power; MDA elevated to the level of F × P
Cyberdefense in F and in CD_m; boundary with CS_m	[49], [25]	Operational and support-and-sustainability groups of the MARCIM capability taxonomy; the two lines of defense
SW	[4], [50], [51], [54]	Will of the state as a constituent of maritime power; political will as the lever for exploiting maritime interests; maritime consciousness in the maritime power system
PW, IW, SocW	[53], [55], [52]	Institutional effectiveness, cohesion, and popular support in the national-will literature; inclusion of will with a declared range of uncertainty
Will as a multiplier of capability	[39], [40]	Capability multiplied by intent; political will as a principal and rarely observable determinant of cyber power
MS	[19], [56], [12]	Three threat dimensions (IC, TE, BC); the security regime of ships and port facilities; the maritime security rank of Colombia
CP as a structural variable	[21], [22], [11], [7], [34], [38], [42], [33], [41]	Definition of cyber power; hard and soft cyber power; cyber power as a key element of maritime power; cyber dimensions of sea systems and the balance of cyber dependence; cyber dependence of the Colombian maritime domain; vulnerabilities of critical maritime systems; cyber power as an articulation of technical, normative, defensive, and diplomatic capabilities; conceptual links between cyberspace and naval power
MARCIM framework	[24], [25], [35]	Reference framework for the modeling and simulation of maritime cyberdefense, its simulation model SERDUX-MARCIM, and the doctoral dissertation in which both were developed
CS_m	[32], [33], [34], [20]	Breaches associated with operational technology; interconnection of shipboard IT and OT systems; vulnerabilities of AIS and ECDIS; cyber risk management in safety management systems
RC_m	[25], [21], [57]	Recovery rate of SERDUX-MARCIM; deterrence by futility; national diagnosis of crisis management and incident response
CDip	[23], [58]	Cyber diplomacy as an instrument of projection; the United Nations framework of responsible state behavior and the Open-Ended Working Group
Cyber context and incidents	[6], [8], [9], [10], [36], [37]	Digital dependence of ports; the 2017 Maersk attack and the 2019 incident reported by the U.S. Coast Guard; cyberspace as a strategic domain; data-driven cyberdefense
Normalization and aggregation	[44], [43], [45], [46]	Weighted geometric mean; limited substitutability; weights as trade-offs; dependence of a component's influence on its variance and correlations
Verification, validation, and robustness	[59], [43], [60], [61]	Definitions of verification, calibration, and validation; extreme-condition, degenerate, and sensitivity tests; Monte Carlo uncertainty analysis with Sobol' indices and expert-weight sampling
Existing measures of maritime and naval power	[12], [26], [27], [28], [29], [30], [31]	Composite measures in Latin America and beyond: all additive, none including cyber power; the limits of shares of a system total
Measures of cyber power and candidate inputs	[41], [39], [40], [62], [63], [57]	National cyber power measures without a maritime dimension; indices proposed as inputs for CS_m and CD_m
